SUMMARY

Fourth-year BS Information Technology student seeking a 400-hour, on-site software development OJT starting January 2027. Builds full-stack web applications with Laravel, PHP, and MySQL and responsive front ends with React and TypeScript. Front-end developer on a team capstone and solo developer of six web apps, eager to learn from experienced developers.

EDUCATION

Central Luzon State University 2023 – Expected 2027
Bachelor of Science in Information Technology *Science City of Muñoz, Nueva Ecija*

- **Relevant Coursework:** Computer Programming, Data Structures and Algorithms, Database Management Systems, Web Systems and Technologies, Systems Analysis and Design

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, SQL, Python, Java, C, C++, HTML, CSS
Frameworks & Libraries: Laravel, React, Preact, Flask, Bootstrap, Tailwind CSS, jQuery, Chart.js, Recharts
Databases & Back End: MySQL, Supabase (PostgreSQL), Firebase, Database Design, CRUD Operations, Row-Level Security
Tools: Git, GitHub, VS Code, Vite, npm, XAMPP, Postman, Figma, WordPress, FlutterFlow
Testing & Data: Vitest, pytest, Debugging, Pandas, Plotly, Microsoft Excel, Data Analysis

PROJECTS

DARIS – Discipline and Reformation Information System 2026
Laravel, PHP, MySQL, JavaScript, HTML, CSS | Team Capstone Project | Front-End Developer

- Developed front-end interfaces for a team-built web system that manages disciplinary cases, records, notifications, and case workflows at Central Luzon State University.
- Built with HTML, CSS, and JavaScript on a Laravel and MySQL back end.

FinTrack – Personal Finance Dashboard 2026
PHP 8, MySQL, jQuery, Bootstrap 5, Chart.js | Personal Project

- Built a multi-role finance platform (client, financial advisor, administrator) for tracking income, expenses, investments, and bank and e-wallet accounts, with a six-month income vs. expenses chart.
- Implemented permission-based data sharing that lets clients choose what each advisor can see and revoke access at any time; secured queries with mysqli prepared statements and role-based page access.

MealMap – Meal Planning and Grocery Management App 2026
React, JavaScript, Vite, Tailwind CSS, Supabase, Vitest | Personal Project

- Built a weekly meal planner, recipe collection, and pantry tracker with expiry and low-stock warnings, plus grocery lists generated from the meal plan that subtract existing pantry stock.
- Developed a pantry-to-recipe matcher that ranks recipes by ingredient match, with unit-conversion logic covered by Vitest unit tests.

CLSU Merit – GWA and Academic Honors Tracker 2026
Python, Flask, Jinja, JavaScript, CSS, pytest | Personal Project

- Built a Flask web app and terminal app that calculate unit-weighted semester and overall GWA and classify academic honors from configurable rules.
- Added CSV import and export, CSRF protection, salted PBKDF2 password hashing, and 162 automated tests with pytest.

StudySync – Student Productivity App 2026
React, TypeScript, Vite, React Router, Recharts | Personal Project

- Built a study workspace with task management, a weekly planner and monthly calendar with overlap warnings, a focus timer, and study-time progress charts.

Other projects: SpendWise, a personal finance tracker with budgets, savings goals, and CSV export (React, TypeScript, Supabase); DayWall, an offline routine planner that runs as a Windows desktop wallpaper (React, Vite).

CERTIFICATIONS & TRAINING

AWS Academy Graduate – Cloud Foundations (20 hours) – AWS Academy Oct 2026

Data Visualization using Plotly; Data Visualization using Bokeh – Coursera Project Network Mar 2026

Cisco Networking Academy (DICT-ITU DTC Initiative) Mar 2026
Creating Compelling Reports; Security and Connectivity Support; IT Customer Support Basics

Pandas; Data Visualization – Kaggle Learn Feb – Mar 2026
